JUNE, 2016

R.O.D. INFORMATIONAL MEETING AT NHERC

Rapid Ohia Death (ROD) is a new disease that has killed ohia trees over 34,000 acres on Hawaii Island, mainly in the Puna and South Hilo districts. It has not yet been confirmed in North Hilo or Hamakua but it still poses a major threat to us all. This is an important issue of which we all should be aware. There will be a meeting at NHERC on Wednesday, June 8th at 6:00 pm featuring Dr. J. B. Friday, PhD College of Tropical Agriculture University of Hawaii at Manoa. I will be attending this meeting and will include relevant information in my President's Message for July 1, but I'm sure many of you will want to attend as well to get the information firsthand.

Rapid 'Ohi'a Death (ROD) Threatens Hawai'i's Native Forests

Rapid Ohia Death is a new disease that has killed ohia trees over 34,000 acres on Hawaii Island, mainly in the Puna and South Hilo districts. The disease has not been confirmed in North Hilo or Hamakua yet. Community members could help with early detection and possible management of the disease. LETS KEEP IT OUT OF HAMAKUA

COMMUNITY MEETING

The Pavilion at North Hawaii Educational &
Research Center (NHERC)

Wednesday, June 8, 2016

at 6:00 p.m.

PRESENTER:

J. B. Friday, PhD
College of Tropical Agriculture
University of Hawaii at Manoa

Here's What's coming up

Don't forget the annual picnic coming up this July 30th at Kalopa State Park. More information will be forthcoming.

**PMKCA ANNUAL PICNIC
AND BINGO BINGE**
